

Participation Assignment

CHEM 1100-General Chemistry II

Name:

#8

Section: 31, TR

Due Date: Tuesday 4/24/2018

1. At 800 K, equilibrium concentrations for the formation of sulfur trioxide, SO_3 , were:

$$[\text{SO}_2]_{\text{eq}} = 0.0030 \text{ M}$$

$$[\text{O}_2]_{\text{eq}} = 0.0035 \text{ M}$$

$$[\text{SO}_3]_{\text{eq}} = 0.050 \text{ M}$$

Calculate the equilibrium constant.

2. At 800 K, a mixture of 0.250 M H_2O and 0.250 M CO is allowed to come to equilibrium. Calculate the equilibrium concentrations of all the chemical species. K_c is 4.11 at 800 K.

3. At 430 °C, 0.600 mol of HI is added to a 2.00 L container and allowed to come to equilibrium. Calculate the equilibrium concentrations of all the chemical species. K_c is 54.3 at this temperature.
